exe . Thus, to hack the save game, we only need to .exe . Voilà! Conclusions {#sec:conclu} =========== In this paper, we have presented the first malware able to be detected on a scale of 10^6. Moreover, the combination of a static and dynamic analysis allows us to circumvent the antivirus heuristics which explain the detection performance of current antivirus engines. This paper also showed the possibility of using a dynamic approach to detect intrusion in a vehicle's infotainment system. Indeed, we focused on the detection of malicious code related to the record, playback and display of multimedia content on the vehicle's infotainment system. To do so, we used a MMT method, which provided a compromise between performance and accuracy. In this context, we believe that our approach will have several applications. First, it will provide a fast detection of malware with a high degree of accuracy. Second, it will allow detecting only the malware related to a single task (record, playback or display) and not the malware attacking the whole system or the whole app store. Thus, the detection performance

will be significantly increased. In the same vein, our approach could be used for any other kind of malware. Finally, this approach can be used to provide an improved detection performance for AV engines. We can also consider that the detection of this malware has been obtained thanks to several indicators in the static analysis. This approach could be applied to detect other malware in a high-performance and accurate way. For example, a method for detecting, from static analysis, malware which uses cryptographic schemes or exploits known vulnerabilities, could also be considered. For future work, we will focus on a feature extraction model to detect different activities such as web browsing, interaction with malicious Web sites or the detection of a virus in the disk. [^1]: The United States currently lacks a national strategy for transgender service, according to a Department of Defense memo obtained by BuzzFeed News. The memo from the Office of the Assistant Secretary of Defense for Manpower and Reserve Affairs, which was signed by acting Assistant Secretary for Reserve Affairs Rachel Holt, lays out steps to create a plan that will "be deployed in order to achieve our most important national security interests."
